

# ConexED / LMS Integrations

ConexED offers seamless integration with popular learning management systems (LMSs) such as D2L Brightspace, Canvas, and others, utilizing the Learning Tools Interoperability (LTI) standard. This LTI integration enables users to access ConexED directly from within their LMS environment, eliminating the need for additional login credentials.

Through the LTI integration, ConexED provides various features that enhance the user experience and facilitate real-time interaction. For example, ConexED Cards can be embedded within the LMS, allowing users to see who is currently online and available for communication. This real-time functionality enables students and staff members to easily connect and engage with each other. By simply clicking the “Knock on Door” button within the LMS, a student can initiate an immediate chat session with a staff member, promoting efficient communication and support.

Moreover, ConexED offers dedicated URLs for its Cards, Virtual Lobby, and appointment Scheduler for each student service group. This allows LMS administrators to create buttons, links, or menu items within the LMS interface, providing easy access to ConexED’s various functionalities. Students can directly navigate to the ConexED Cards, Virtual Lobby, or Scheduler with just a click, enabling them to receive immediate and on-demand support whenever needed.

ConexED has an established LTI integration specifically designed for Canvas, ensuring a seamless user experience within the Canvas LMS environment. Additionally, ConexED provides the flexibility to create custom integrations for other LMSs such as Blackboard, D2L, and more. This adaptability allows educational institutions using

different LMS platforms to leverage the full capabilities of ConexED within their existing infrastructure.

Overall, ConexED’s LTI integration with LMSs simplifies access to its features, enables real-time interaction, and enhances student support services by seamlessly integrating ConexED functionalities within the familiar LMS environment.
